

IRON FIREMAN

SERIES 31 STANDARD HOPPER MODELS

*Model illustrated is No. 3 Short,
equipped with Volumeter.*

SERIES 31 underfeed stokers are designed for use in high or low pressure steam boilers, hot water boilers, and industrial applications. They are made in three sizes, and each size is available in two standard lengths.

These stokers are also available, on special factory order, in extended lengths

for use either as hopper models or as bunker models.

A metering type worm conveys the coal to the firebox in a loose, unpacked condition so that air can easily penetrate the entire fuel bed.

Air required for combustion is supplied by a quiet fan, and is regulated by an adjustable damper. The Volumeter is also

available on this series for automatic air volume regulation.

These models are normally equipped with heavy, ribbed, stationary grates; but can be supplied with step grates or with dump grates.

Iron Fireman controls regulate the stoker to meet steam, hot water, or other load requirements.

SPECIFICATIONS

HOPPER . . . 750 pound capacity . . . open type . . . 11-gauge steel . . . baffle protects hopper against radiant heat . . . hopper hinged to base . . . can be swung to either side or entirely removed . . . can also be positioned for easy filling from front, back, or either side.

HOPPER BASE . . . made of $\frac{1}{4}$ -inch steel plate . . . equipped with cleanout, coal baffle, and combination wearing plate and spike guide.

COAL WORM . . . metering type . . . cold-drawn steel flights, $\frac{1}{8}$ -inch thick in hopper section and $\frac{1}{2}$ -inch thick in worm housing . . . flights electrically welded to solid steel core . . . sectional type worms and worm housings used on No. 2 Long, No. 3 Long, No. 4 Short, and No. 4 Long stokers.

WORM HOUSING CLEANOUT . . . permits removal of foreign objects without emptying hopper . . . special guide plate directs foreign material to the easily removable cover.

FAN . . . radial vane type . . . quiet . . .

accurately balanced . . . two fan speeds . . . ample capacity for all coals . . . high efficiency gives low power consumption.

AIR REGULATION (standard) . . . adjustable damper . . . also banking damper for "off" periods.

AIR REGULATION (optional) . . . Volumeter . . . automatically maintains correct volume of air for efficient combustion when adjusted to coal and burning rate . . . simple, positive, pneumatic operation . . . dash-pot action gives delayed damper opening . . . damper closes during "off" period and banks fire.

RETORT . . . one-piece construction on No. 2 and No. 3 stokers . . . sectional construction on No. 4 stoker.

TUYERES . . . removable, sectional tuyeres . . . Venturi type, self-cleaning air openings . . . accurately sized and proportioned for various coals and burning rate of each model.

GRATES . . . stationary type . . . air-cooled . . . heavy, ribbed design increases cooling surface and prolongs life.

TRANSMISSION . . . continuous feed type . . . totally enclosed . . . worm and spur gear reduction . . . bronze worm gear . . . drop-forged gears, heat treated and tested for hardness . . . all parts accurately machined . . . ball bearings used on high speed shafts . . . three speeds provide $\frac{1}{8}$, $\frac{2}{8}$, and full-rated coal feed capacity . . . gears can be shifted while stoker is in operation.

DRIVE . . . flexible V-belt . . . dual sheaves provide two fan speeds, and in conjunction with three-speed transmission, give six coal feeding rates . . . heavy steel guards adequately protect motor and belts.

OVERLOAD PROTECTION . . . straight shear pin . . . easily replaced . . . gives positive, fool-proof protection.

AIR INJECTOR . . . supplies high pressure air to coal worm housing.

MOTOR . . . mounted on resilient base . . . the standard motors are:
No. 2 Stoker—repulsion-induction type.
No. 3 Stoker—squirrel cage, induction type.
No. 4 Stoker—squirrel cage, induction type.

IRON FIREMAN MANUFACTURING COMPANY

With low fan speed	140 to 175	200 to 240	250 to 325
With high fan speed	160 to 200	220 to 265	300 to 375
Motor Size	$\frac{3}{4}$ H. P.	1 H. P.	2 H. P.
Approximate Shipping Weight**			
Short Model	1220	1280	1460
Long Model	1280	1340	1510
Railroad Classification	3rd	3rd	3rd

*Varies with density of coal. Minimum rate shown is based on coal weighing 44 pounds per cu. ft., maximum on 54 pounds per cu. ft. Low and intermediate transmission speeds give $\frac{1}{3}$ and $\frac{2}{3}$ of coal feeding capacity.

**Complete with tuyeres, motor, and standard controls; but without grates, boiler front, fire-doors, or other extras.

STANDARD EQUIPMENT

CONTROLS . . . The controls included with each burner are:

No. 2 Stoker:

One—Limit Control, high voltage type
Note:—Magnetic Starting Switch (extra equipment) required with polyphase or direct current motor.

No. 3 and No. 4 Stoker:

One—Limit Control, high voltage type.
 One—Magnetic Starting Switch, 220 or 440 volt, 60 cycle, 3-phase.

MOTOR . . . The standard motors are:

No. 2 Stoker—1725 r.p.m., 110 or 220 volt, 60 cycle, single phase.

No. 3 Stoker—1725 r.p.m., 220 or 440 volt, 60 cycle, three phase.

No. 4 Stoker—1725 r.p.m., 220 or 440 volt, 60 cycle, three phase.

GRATES . . . Any setting, as listed in table, up to and including the following sizes:

No. 2 Stoker—37 $\frac{1}{4}$ in. long x 33 in. wide

No. 3 Stoker—40 $\frac{1}{4}$ in. long x 33 in. wide

No. 4 Stoker—52 $\frac{1}{2}$ in. long x 46 $\frac{1}{2}$ in. wide (extra charge for larger settings)

TUYERES . . . Type P-25 or type F-40 are included with these models. Other types are listed under Extra Equipment. Specify type required.

EXTRA EQUIPMENT

CONTROLS . . . Controls are available for almost any type of regulation which may be required. Motors and controls can be furnished for most types of electrical current. Refer to control and motor data sheets or factory for further information.

OPTIONAL HOPPERS . . . A closed type, 750-pound hopper, or an open type, 1200-pound hopper can be supplied instead of the standard hopper.

Hopper can be mounted on base for filling from either right or left hand side, or from the rear, at slight additional charge, if specified when order is placed with factory.

BUNKER ADAPTOR . . . To equip these models for bunker feed installations, a bunker adaptor and cut-off gate can be supplied in place of the hopper.

EXTENDED LENGTHS . . . Extended length stokers can be supplied on special factory order. The available lengths range from a minimum of 3 feet to a maximum of 20 feet, in one foot increments. These lengths are added to the length of the No. 2 Long, No. 3 Long, and No. 4 Short Stokers.

AGITATOR . . . Should be used on all installations, except where a dry, sized coal is burned. **MUST** be used with damp or slack coal.

VOLUMETER . . . Must be specified if desired.

TUYERES . . . Type "AD" or type "ADF" tuyeres can be used on these models. Refer to table for proper grates.

STEP GRATES . . . Refer to table for available settings.

DUMP GRATES . . . Available on No. 3 Long, No. 4 Short, and No. 4 Long Stokers. Refer to table for available settings.

SHEAR PIN ALARM . . . Automatically stops stoker and rings alarm bell if pin shears.

AUXILIARY EQUIPMENT . . . Low water cut-offs, indirect water heaters, boiler fronts, fire-doors, firing tools, and other equipment available for shipment with the stoker.

Capacities are based on an arbitrary, over-all stoker and boiler efficiency of 70%. Should boilers be encountered which will not develop this efficiency, corresponding increases in required coal feed must be made.

CAUTION: Do not confuse E.D.R. Ratings (equivalent direct radiation) with "Standing" or "Direct Radiation."

IRON FIREMAN

SERIES 32 POWERAM HOPPER MODELS

*Model illustrated is No. 4-AD Short,
equipped with Volumeter.*

SERIES 32 underfeed stokers are designed for use in high or low pressure steam boilers, hot water boilers, and industrial applications. They are made in two sizes, and each size is available in two standard lengths.

These stokers are also available, on special factory order, in extended lengths

for use either as hopper models or as bunker models.

Coal is delivered to the retort in a loose, unpacked condition by a metering type worm, and is evenly distributed over the grates by a reciprocating ram.

Air required for combustion is supplied by a quiet fan, and is regulated by an adjustable damper. The Volumeter is also

available on this series for automatic air volume regulation.

These models are normally equipped with heavy, ribbed, stationary grates; but can be supplied with dump grates.

Iron Fireman controls regulate the stoker to meet steam, hot water, or other load requirements.

SPECIFICATIONS

HOPPER . . . 750 pound capacity . . . open type . . . 11-gauge steel . . . baffle protects hopper against radiant heat . . . hopper hinged to base . . . can be swung to either side or entirely removed . . . can also be positioned for easy filling from front, back, or either side.

HOPPER BASE . . . made of $\frac{1}{4}$ -inch steel plate . . . equipped with cleanout, coal baffle, and combination wearing plate and spike guide.

COAL WORM . . . metering type . . . cold-drawn steel flights, $\frac{1}{8}$ -inch thick in hopper section and $\frac{1}{2}$ -inch thick in worm housing . . . flights electrically welded to solid steel core . . . sectional type worms and worm housings used on No. 3-AD Long, No. 4-AD Short, and No. 4-AD Long stokers.

WORM HOUSING CLEANOUT . . . permits removal of foreign objects without emptying hopper . . . special guide plate directs foreign material to the easily removable cover.

FAN . . . radial vane type . . . quiet . . . accurately balanced . . . two fan speeds . . . ample capacity for all coals . . . high

efficiency gives low power consumption.

AIR REGULATION (standard) . . . adjustable damper . . . also banking damper for "off" periods.

AIR REGULATION (optional) . . . Volumeter . . . automatically maintains correct volume of air for efficient combustion when adjusted to coal and burning rate . . . simple, positive, pneumatic operation . . . dash-pot action gives delayed damper opening . . . damper closes during "off" period and banks fire.

RETORT . . . one-piece construction on No. 3 AD stoker . . . sectional construction on No. 4-AD stoker.

COAL DISTRIBUTOR . . . reciprocating, wedge-shaped block in bottom of retort.

TUYERES . . . removable, sectional tuyeres . . . Venturi type, self-cleaning air openings . . . accurately sized and proportioned for various coals and burning rate of each model.

GRATES . . . stationary type . . . air-cooled . . . heavy, ribbed design increases cooling surface and prolongs life.

TRANSMISSION . . . continuous feed type . . . totally enclosed . . . worm and spur gear reduction . . . bronze worm gear . . . drop forged gears, heat treated and tested for hardness . . . all parts accurately machined . . . ball bearings used on high speed shafts . . . three speeds provide $\frac{1}{8}$, $\frac{2}{8}$, and full rated coal feed capacity . . . gears can be shifted while stoker is in operation.

DISTRIBUTOR TRANSMISSION . . . operates reciprocating ram . . . bronze worm gear reduction . . . protected by separate shear pin.

DRIVE . . . flexible V-belt . . . dual sheaves provide two fan speeds, and in conjunction with three-speed transmission, gives six coal feeding rates . . . heavy steel guards adequately protect motor and belts.

OVERLOAD PROTECTION . . . straight shear pin . . . easily replaced . . . gives positive, fool-proof protection.

AIR INJECTOR . . . supplies high pressure air to coal worm housing.

MOTOR . . . mounted on resilient base . . . squirrel cage, induction type.

SERIES 32 POWERAM HOPPER MODELS

SPECIFICATIONS

	No. 3-AD	No. 4-AD
Catalog Number		
Short Model	3231	3241
Long Model	3232	3242
Maximum Coal Feed, in pounds per hour*		
With low fan speed	200 to 240	250 to 325
With high fan speed	220 to 265	300 to 375
Motor Size	1 H. P.	2 H. P.
Approximate Shipping Weight**		
Short Model	1630	1780
Long Model	1700	1800
Railroad Classification	3rd	3rd

*Varies with density of coal. Minimum rate shown is based on coal weighing 44 pounds per cu. ft., maximum on 54 pounds per cu. ft. Low and intermediate transmission speeds give $\frac{1}{4}$ and $\frac{3}{8}$ coal feeding capacity.

**Complete with tuyeres, motor, and standard controls; but without grates, boiler front, fire-doors, or other extras.

STANDARD EQUIPMENT

CONTROLS . . . The controls included with each burner are:

- One—Limit Control, high voltage type.
- One—Magnetic Starting Switch, 220 or 440 volt, 60 cycle, 3-phase.

MOTOR . . . 1725 r.p.m., 220 or 440 volt, 60 cycle, 3-phase.

GRATES . . . Any setting, as listed in table, up to and including the following sizes:

No. 3-AD Stoker:
40½ in. long x 41¾ in. wide

No. 4-AD Stoker:
50½ in. long x 41¾ in. wide

(Extra charge for larger settings)

TUYERES . . . Type "AD" or type "ADF" tuyeres are included. Specify type required.

EXTRA EQUIPMENT

CONTROLS . . . Controls are available for almost any type of regulation which may be required. Motors and controls can be furnished for most types of electrical current. Refer to control and motor data sheets or factory for further information.

OPTIONAL HOPPERS . . . A closed type, 750-pound hopper; or an open type, 1200-pound hopper can be supplied instead of the standard hopper.

Hopper can be mounted on base for filling from either right or left hand side, or from the rear, at slight additional charge, if specified when order is placed with factory.

BUNKER ADAPTOR . . . To equip these models for bunker feed installations, a bunker adaptor and cut-off gate can be supplied in place of the hopper.

EXTENDED LENGTHS . . . Extended length stokers can be supplied on special factory order. The available lengths range

from a minimum of 3 feet to a maximum of 20 feet, in one foot increments. These lengths are added to the length of the No. 3 Long and No. 4 Short stokers.

AGITATOR . . . Should be used on all installations, except where a dry, sized coal is burned. MUST be used with damp or slack coal.

VOLUMETER . . . Must be specified if desired.

DUMP GRATES . . . Available on all stoker sizes except No. 3-AD Short. Refer to table for available settings.

SHEAR PIN ALARM . . . Automatically stops stoker and rings alarm bell if pin shears.

AUXILIARY EQUIPMENT . . . Low water cut-offs, indirect water heaters, boiler fronts, fire-doors, firing tools, and other equipment available for shipment with the stoker.
